

Trimble Capture

DATA COLLECTOR SOFTWARE

POWERFUL, SEAMLESS SIMPLICITY

Trimble® Forensics Capture software is a powerful yet intuitive data collector software that simplifies scene evidence gathering and enables a seamless transition to Trimble Forensics Reveal desktop software for in-depth analysis.

POWERFUL MOBILITY IN YOUR POCKET

Android-compatible for use with the latest in mobile technology, Capture is the perfect tool for any accident investigator equipped with a mobile collecting device. Onboard the rugged, lightweight Trimble TDC100 or MM50, Capture's User Vision technology allows you to control the movement of your robotic total station for easy, precise data collection.

ROBUST AND VERSATILE. WITH POWERFUL SUPPORT.

With Capture, you can record points with an extremely high level of accuracy. Capture makes it easy to add/edit points and attach evidence markers or photos. And Capture helps you recognize errors early, so you can fix them on scene. Plus, you can get even better results by taking advantage of Trimble's training and teaching courses; they help you master the tools provided with Trimble Capture.

SMOOTHER, BETTER WORKFLOWS.

Capture enables workflows that are smooth, simple and easy to manage. In the field, you can see a diagram of your scene as you shoot it—in 2D or 3D, from any angle—and quickly zoom-in on evidence-rich areas. And, by adding notes and photos to your points, your work back in the office becomes easier and more productive.

STAY PRECISE AND PRODUCTIVE WITH TRIMBLE FORENSICS REVEAL

Reveal uses industry-leading optical and scanning technology, so you can maintain high levels of accuracy while boosting productivity. By supporting small datasets from surveying tools such as the Trimble M3 or full 3D scans created with the Trimble TX6, Reveal allows you to quickly and effectively model, animate, record, and present compelling recreations and visualizations.
